

Dušan Nikodijević

Senior Frontend Developer

Email: dusan.nikodijevic89@gmail.com | Phone: +381 (66) 27-06-89 | LinkedIn: www.linkedin.com/in/dusan-nikodijevic-549bb680

Date of Birth: 27/06/1989

Senior Frontend Developer with over 7 years of experience specializing in building scalable, high-performance web applications using **Angular** and **Vue.js**. Expert in architecting modern SPAs and implementing Micro Frontends, with extensive experience working within Cloud-native ecosystems (AWS, Kubernetes, OpenShift). Proven track record of improving code quality through automated testing and collaborating on CI/CD pipelines.

Professional Experience

Solution Programmer

Engineering Software Lab Serbia • Full-time | April 2022 - Present (Ongoing)

Angular Phase (July 2025 - Present)

- AI Optimization:** Actively leveraging enterprise AI tools and custom prompts to accelerate complex workflows and refactoring cycles.
- Enterprise Architecture:** Engineering core shared frontend libraries, toolkit structures, and reusable utilities with **Angular 18** and **TypeScript 5** to align cross-team consistency.
- Performance & CI/CD:** Enforcing code quality via SonarScanner, ESLint, and Husky; managing modular frontends within OpenShift and CircleCI.

Vue.js Phase (2022 - 2025)

- Micro-Frontend Orchestration:** Spearheaded large-scale dependency upgrades and architecture migration from Vue 2 to **Vue 3 (Composition API)** inside a **SingleSPA** ecosystem.
- Product Ownership:** Acted as a Frontend Solo Developer driving greenfield solutions for core EU-funded systems from conceptual wireframes to deployment.

Software Engineer

Quest Software • Full-time | July 2021 - April 2022

- State Management & Performance:** Architected reactive data structures utilizing **NgRx** and **RxJS** alongside **Angular 11/12** to manage complex cloud observatory systems.
- Pixel-Perfect Design Integration:** Collaborated directly with design teams to ensure strict compliance and absolute fidelity using custom component styling and Angular Material.

Angular Developer

PDT doo • Full-time | June 2019 - July 2021

- Greenfield Development:** Took complete architectural ownership and delivered modular business management modules, layout wrappers, and dynamic web interfaces.
- Automated Testing:** Guaranteed code stability across core web platforms by integrating end-to-end testing pipelines with Cypress and Jasmine.

Angular Developer

Engineers London • Part-time | November 2017 - May 2018

- Application Provisioning:** Configured framework boilerplates, modular directories, and custom layout styling sheets for client CMS applications using Angular 4/5 and Sass/Less.

Web Developer - Internship

Juratech Systems • Full-time | July 2017 - November 2017

- **Legacy Migration:** Modernized web structures, resolved code gaps, and assisted in refactoring early client-side builds into AngularJS modules.

Education

Metropolitan University, Faculty of Information Technology

Bachelor's Degree with Honours in Information Technology | Belgrade, Serbia | 2012 - 2018

Projects

NetaSaas

Scope: Enterprise Billing Workflow Engine (Angular 18)

Developed and maintained a complex enterprise billing workflow application using Angular 18, featuring multi-step UI flows covering the entire billing run lifecycle (creation, execution, completion, and error resolution). Implemented end-to-end features including billing parameters configuration, invoicing adjustments, and run execution controls. Built an error monitoring feature with a dedicated dialog and report generation. Added filter persistence across list pages, updated legacy inputs to modern select-based controls, and collaborated on the shared core component library.

Invest4Nature (EU-Funded)

Scope: Climate Resilience Cost-Benefit Matrix (Vue 3)

Architected a greenfield standalone Vue 3 application hosting three major ecological/financial toolkits:

- **Cost Benefit Analyzer:** Assesses qualitative costs and financial viability values of Nature-Based Solutions (NBS) to unlock climate resilience funding. Supports processing local pre-defined JSON file uploads mapped to comprehensive ChartJS overviews (yearly benefits, cost variances) alongside a fully dynamic user form to generate fields, sections, and editable structures on-the-fly with integrated PDF/CSV/XLSX reporting exports.
- **Performance Assessment:** Enables the analytical exploration of qualitative indicators related to ecosystem benefits, operating as a modular standalone toolkit or as part of a multi-criteria analysis.
- **Recommender:** Provides a free-text NLP description engine querying global NBS solutions optimized by custom property filters. Leverages geographical map visualizations to boost user engagement and supports localized qualitative indicator ecosystem evaluations.

DIGIBUILD (EU-Funded)

Scope: Smart Building Diagnostics Suite (Vue 3)

Executed the full frontend migration from Vue 2 to Vue 3, conducting research and investigation of new ecosystem plugins to benefit overall UX. Architected and built two distinct standalone Vue 3 pilot applications using Composition API and ChartJS:

- **Heron:** Tracks power and energy consumption of connected home hardware appliances (TVs, washing machines, ACs, etc.) via attached sensors. Features an interactive date-range chart visualization alongside advanced prediction and recommendation sub-pages.
- **Emotion:** Displays real-time consumption and production active power metrics for industrial/residential structures. Features a mocked static Decision Support System (DSS) panel and an interactive Vehicles system to select, visualize, and map car charging strategies within comprehensive State of Charge (SoC) reports and tables.

Digital Enabler

Scope: Micro-Frontend & Migration Infrastructure (SingleSPA)

Led the architectural migration of all micro-frontends from Vue 2 to Vue 3 using the Composition API. Developed core SingleSPA micro-frontends (Mashups, Datasources, Flows, Custom Operators) and deployed standalone Console and data-sharing applications (Share-form) to manage the listing of services platform-wide. Spearheaded bug fixing, feature planning, and roadmap design updates based on client requirements.

Foglight Cloud / Spotlight Cloud

Scope: SaaS Cross-Platform Database Observability Platform (Angular & NgRx)

Contributed to the web application interface for Quest's flagship cloud-managed observability platform. Focused on high-fidelity performance graphs, workload metrics charts, historical blocking-lock analysis panels, and interactive wait-state visualizers that allow Database Administrators to spot query bottlenecks across multi-tenant servers effortlessly.

Totalsport

Scope: E-Commerce Product Management Platform & Inventory CMS (Angular)

Engineered an internal, secure product management catalog system used to handle large-scale sports apparel lines (including official Nike and Adidas gear) syncing directly with an outer customer-facing WordPress theme. Architected an internal role-based security layout separating platform administrators from specialized wholesale clients who purchase inventory in bulk. Built robust secondary workflows including user authentication screens, dynamic invoice generation, and external financial API integrations tracking real-time Euro conversion exchange rates.

Fuentis ETL Module

Scope: Configuration Management ETL Interface (Angular & PrimeNG)

Independently built and deployed the comprehensive frontend application for the ETL configuration suite, designed as an analytical plugin data-interface for the main Fuentis ISMS platform. Developed mapping tools enabling enterprise clients to cleanly configure, stream, and sync external asset inventory databases (like CMDB, ITSM, and Active Directory) into central compliance tables.

Digital News Agency (DNA)

Scope: Enterprise Media CMS System (Angular 4)

Pioneered the core application development and component layout implementation for a real-time corporate media CMS. Designed high-density item arrays and customized viewports (Clients & Media Views) hosting rich multimedia content. Handled massive asset structures through specialized data sheets and high-interaction CRUD popup forms.

Skills & Tooling

Programming Languages: JavaScript, TypeScript (5.x)

Frameworks: Angular (18), Vue.js (v2/v3 Composition API), AngularJS, PHP

Architecture: Micro-frontends (SingleSPA, Webpack 5 Module Federation), SPA, Responsive Web Design

Tools & Ecosystem: Git, GitHub, GitHub Desktop, GitLab, Jira, CircleCI, Jenkins, Vite, Webpack 5, npm/pnpm, VS Code, WebStorm, Cursor

Testing & Quality: Cypress, Jasmine, Jest, SonarQube, SonarScanner, ESLint, Husky

Cloud & DevOps: AWS, OpenShift, Kubernetes, Docker, MinIO

AI & Productivity: AI-Assisted Development (GitHub Copilot, ChatGPT, Claude Sonnet), Agile/Scrum

Languages

- English (Advanced / Fluent)
- Serbian (Native)
